

# Executive Business Strategy & Recommendations

## 1. Fix the "Catastrophic Checkout Leak" (Product & UX Audit)

- **The Data Finding:** Your Funnel Drop-off Analysis (Quest 2) proves that your biggest point of failure is between *Step 1 (Product Page View)* and *Step 2 (Add to Cart)*, losing nearly **69% of your traffic instantly**.
- **The Action Item:**
  - The product engineering team must review product landing page speeds. Slow loading times kill buying intent.
  - Conduct user testing on product pages. High visibility of the "Add to Cart" button needs to be prioritized.
  - Check if your pricing or unexpected shipping estimates shown early on are scaring users away.

## 2. Aggressively Reallocate Marketing Budget to Email (Marketing ROI)

- **The Data Finding:** Your Marketing ROI Evaluation (Quest 1) shows that while **Paid Ads** bring in the highest raw volume of clicks, **Email Campaigns** achieve a massive, highly efficient **33.91% conversion rate**.

- **The Action Item:**
  - **Shift budget:** Reduce top-of-funnel spending on low-converting, expensive broad paid ad channels and invest heavily into growing your email list.
  - **Automate workflows:** Set up advanced abandoned-cart email sequences. Because your Customer Velocity data ([Quest 4](#)) shows users take multiple actions before buying, a well-timed email sequence within 24 to 48 hours is your highest-leverage opportunity to capture revenue.

### 3. Implement a "Hidden Gems" Merchandising Strategy (Inventory)

- **The Data Finding:** Your Product Performance query ([Quest 3](#)) highlights that certain `product_id` lines have incredibly high conversion rates relative to their low view counts, while others have thousands of views but zero purchases.
- **The Action Item:**
  - **Promote winners:** Move low-view, high-converting products to the front page, feature them in email newsletters, and prioritize them in search carousels.
  - **Investigate losers:** Isolate high-view, low-sale items. Audit these pages for broken images, missing descriptions, or uncompetitive pricing tiers.

### 4. Build a Nurturing Retargeting Cycle (Customer Velocity)

- **The Data Finding:** The Behavioral Velocity metric ([Quest 4](#)) proves that single-session impulse buys are rare; customers interact with the platform multiple times before checking out.
- **The Action Item:**
  - Stop trying to close the sale purely on the first click.
  - Configure custom browser tracking pixels to run low-cost retargeting ads displaying the exact `product_id` a user viewed previously, reinforcing their consideration window across a 4-to-6 touchpoint sequence.
